JRW

Dear Jim,

Sorry to be so long in writing to you. I did phone your folks some time ago for your address, intending to get a letter off to you immediately, but other things intervened - the tables of moonrise and moonset for the Journal, meter reports to Dr. Millman, the June issue of Skyward.

Just over a month ago I sent copies of your comet and Nova search forms to Vern Ramsay and other members of the committee, together with a long letter which covered most of the points that you and I had discussed. I intended sending you a copy of the letter but did not put in enough carbons. However, I have got copies of the forms which I now enclose. As you will see, each fitted very nicely on to one page. I had difficulty with the chart of areas, though. It was just a little too long to have a supply run off on the machine at the office, so I'm trying to get another height idea.

I haven't had a reply to my letter from Vern yet, but it did result in a letter ~~from~~ to ~~Earl~~ to Vern from Earl Milton, who sent me

a copy. Geoffrey has done some work on his forms too.

Thanks for the draft forms you enclosed in your letter. They look pretty good to me. I'll be sending copies on to the committee and will try to keep you up to date on developments.

So you haven't very good conditions for observing right now. Just wait until winter comes, though. In the meantime, perhaps you had better take up solar observing.

Did you find out if anyone up there has a radio transmitter? It would be nice if we could keep in touch with you by radio.

By the way, exactly where is Great Whale River? Several people have asked me and I don't know. So could you draw me a little map?

Best regards
