

APRIL 20, 1962. 21:00 E.S.T.

GEORGE WEDGE

7 X 50 BINOCULARS

MONTREAL CENTRE, R.A.S.C.

MAG. 6 LENGTH OF TAIL $1\frac{1}{2}^{\circ}$

"TAIL APPEARED TO FAN OUT AND BECOME QUITE BROAD
NO NUCLEUS OBSERVED."

APRIL 20, 1962 20:30 E.S.T.

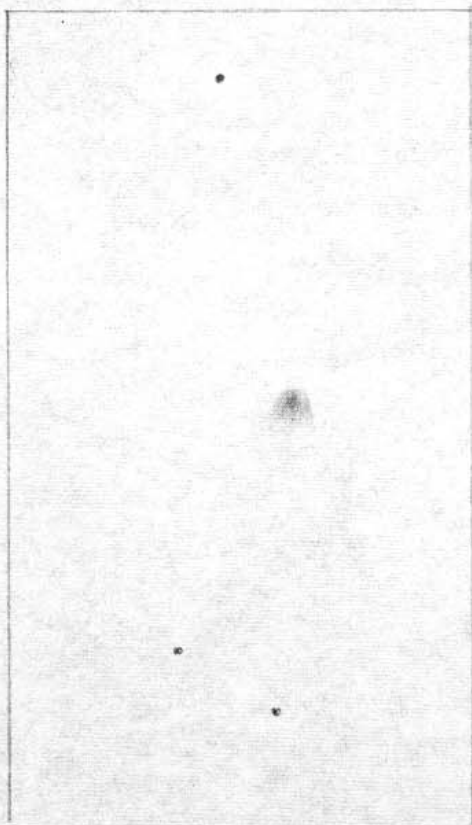

PETER HINTON

MONTREAL CENTRE, R.A.S.C.

6" REFLECTOR 48X.

CLEAR SKY. GOOD SEEING. GOOD TRANSPARENCY.

"Not difficult to find due to quite clear sky.
Magnitude about 6 and no bright stars near it.
It looked very like a globular cluster but a
vague broad tail could just be determined."

copy for National Co-ordinator, R.A.S.C.
