

411 Brixton Avenue
St. Lambert, P.Q.
September 18, 1962

Dear Mr. Matte,

I understand that you were in the Montreal area last month, and that you looked me up. I regret that I was unable to see you, but although I am still using the above address for correspondence I am actually working at Great Whale River, P.Q. Since I expect to return to St. Lambert within a year, I felt it best to continue using that address, rather than change it back and forth on the C & N Section forms. All mail is forwarded to me with very little delay.

Did you have good luck with the Comets of 1962? Although only Seki-Lines and Humason were widely observed, I understand that you observed other comets as well! I made a few observations of Comet Seki-Lines, but because of poor weather and high latitude, I failed to pick up Comet Humason.

Would any members of the Qubec Centre be interested in systematic searches for Comets & novae? If so, I will send more forms.

Best regards to you and the Centre.

Yours truly,

Jim Low
