

50

January 27, 1963.

Dear Jim:

Sorry to be so slow in getting the December reports off to you.

I was inundated with work - also got a 'discourse' off my er chest for the Centre (last night). So this morning I buckled down to getting the Centre's records completed.

Last night Mr. DeKinder announced that a new comet had been located by a Japanese astronomer. Unable to locate Mr. DeKinder today, I found that Mr. Gilbert (our Vice-President) had the information (after a myriad of calls!).

The comet is called Ikeya - 1963A. The coordinates are as follows:

Jan.11.	13h56m	-29°	40m	Mag.12
21	13h59m	-35°	11m	
31	13h58.8m	-45°	16m	
Feb.10	13h36.8m	-71°	28m	
20	01h20.3m	-46°	20m	
Mar. 2	02h10.7m	-11°	.02m	

Eastern Standard T.

Good looking.

Yours truly,

*Dot Yane*
