Dear Mr. Duntain,

Thank-you for the latest search reports. How are observations of the nova and Comet Ikeya coming along?

There is another comet in the sky now, but is not bright enough for a formal Announcement at this time. If the Hamilton Centre would like to observe it, here is an approximate ephemeris:

Date	R.A.	Dec	Mag.
Apr 4	19:10.2	52°01'	7.7
12	18:45.0	54 05	7.3
20	18:04.9	55 55	7.0

Please let me know if you see this comet.

Best regards
