

88 Lorne Ave.,
St. Catharines, Ont.
Monday July 1, 1963.

Mr. Jas. W. A. Low,
411 Briston Ave.,
St. Lambert, P.Q.

Dear Sir:

Enclosed are negative search reports of
three areas for June, 1963.

Here are magnitude estimates for Nova
Herculis 1963 and Comet Alcock, 1963 b, for the month
of June:

DAY	TIME E.S.T.	NOVA HERCULIS 1963	COMET ALCOCK 1963 b.	INSTRUMENTS
1	20:30	7 ^m .4	4 ^m .0	7x50 BIN. N ^o 4 1/2 f8 B&Z.
15	24:00	7 ^m .6	6 ^m .5	" " 4" f5 B&Z.
16	22:30	7 ^m .6	6 ^m .5	" "
17	23:00	7 ^m .6	6 ^m .5	" "
18	22:00	7 ^m .8	6 ^m .6	" "
21	22:00	7 ^m .8	6 ^m .7	" "
22	22:00	7 ^m .8	6 ^m .8	" "
23	23:45	7 ^m .8	(TOO LOW)	" "
24	22:00	7 ^m .8	7 ^m .5	" "
25	22:45	7 ^m .8	8 ^m .0	" "
26	22:15	7 ^m .9	(HAZE)	" "
27	21:45	7 ^m .8	(MOON)	" "

The last three days of June were too hazy for useful observations
of the Nova and Comet.

With best wishes for clear skies (esp. July 20),
Hugh W. A. Maclean,
Niagara Falls Centre.

P.S. I'm not sure that I'll get down for the eclipse - I will not be back
to work for another two weeks. It depends on how I feel.
