Dear Mr. Duquette,

I regret the delay in answering your letter of August 16 regarding the Comet and Nova section, but I was very busy for the past month.

I am pleased that you are interested in the C & N Section, and I have enclosed the forms used with this programme. These forms explain this programme and should be self-explanatory, but if you have any difficulty in understanding anything, please let me know. Your 7x50 binoculars should be ideal for Comet and Nova searching and your 2.4" telescope will be good for observing these objects when they do appear.

At the moment, I am out of copies of the "Area Chart" and I will send you one when I can get another supply. However, in the meantime, may I suggest that you could start with one or more of the following areas:

Area # 430	R.A. <del>23000</del> to 24:00	Dec. 80 to 90°
9	00:00 to 01:00	60 to 70°
72	08:00 to 08:40	20 to 30°
73	16:00 to 16:40	10 to 20°
312	20:20 to 21:00	0 to 10°

Best regards and Good Observing,

*J. Low*
