November 16, 1965

Dear Sir:

I plan to prepare a summary of observations of Comet Ikeya-Seki for the next "Bulletin" of the Comet and Nova Section. I hope the report will include the work of all Canadian Observer's of this comet, and to assist me, could you please send a summary of your own observations, and arrange to have a summary made of all your Centres observations. Such a summary could list the following:

1. Name of Observer
2. Dates and times of observations
3. Magnitude estimates.
4. Length of tail
5. Other remarks.

Copies of selected drawings and detailed reports would be most welcomed. Enclosed is a copy of C & N Form #4, which explains how to make an observation of a comet.

Good Observing!

Jim Low
