

NOVA HERCULIS? 1963

Observations made by Mr. H.N.A. Maclean during June and July, 1963. Magnitudes have been corrected for a revised magnitude value for a comparison star. (Mag. of star was given at 7.9, but was corrected to 8.4).

JUNE:

1	7.7
15	8.0
16	8.0
17	8.0
18	8.3
21	8.3
22	8.3
23	8.3
24	8.3
25	8.3
26	8.4
27	8.3

7x50 bin. and
4½" f8 refl.

JULY:

1	8.4
2	8.4
3	8.3
4	8.4
5	8.4
6	8.4
8	8.2
10	8.3
11	8.2
12	8.3
15	8.3
16	8.4
23	8.4
24	8.5
29	8.3
30	8.3

Same magnitude with blue filter, barely visible through a yellow orange filter and invisible with an amber filter.
